Professional Summary

Computer Science undergraduate (2026) focused on backend and full-stack engineering with hands-on experience building RESTful services, microservices-oriented modules, and CI/CD-ready delivery workflows using Java, Python, Node.js, PostgreSQL, and React.

Technical Skills

Core: Java, Python, Node.js, RESTful services, Microservices, CI/CD pipelines
Languages: Java, Python, JavaScript, C++, C, SQL
Backend and Frameworks: Node.js, Express.js, Flask, React, JWT, API integration
Databases and Cloud: PostgreSQL, MongoDB, SQLite, AWS fundamentals
Tools and CS: Git, Linux, Docker, DSA, OOP, debugging, unit testing

Internship Experience

Android Development Intern, Skillbit Technologies Jun 2025 – Jul 2025
• Assisted Android module development and backend API integration; collaborated with senior engineers to resolve 15+ defects and improve release stability in CI/CD-driven workflows.

Web Developer Intern, CodSoft Jul 2024 – Aug 2024
• Built 3 responsive web applications, integrated external APIs, and improved frontend performance by approximately 20%.

Projects

NGO-Connect AI (Full-Stack Platform) 2025 – 2026
React, Node.js, Express, PostgreSQL, Tailwind CSS, JWT, Gemini API
• Engineered a multi-role platform with 31 frontend routes and 149 RESTful endpoints, including 8 AI endpoints for recommendations, campaign classification, proposal drafting, fraud scoring, forecasting, support chat, and volunteer matching.
• Improved platform engagement using personalized recommendations, campaign update analytics, and role-aware AI chat support while enabling measurable donor interaction tracking (open/click signals).
• Designed microservices-aligned backend modules with 35 PostgreSQL tables and webhook reliability operations (dead-letter replay, metrics, cleanup), validated by a 35-step smoke suite (21.69 ms avg, 72 ms p90).

Internship Yuva - Advanced Subscription Manager (GitHub) 2026
Python, Flask, SQLite, pytest
• Engineered a subscription management app with authentication, per-user CRUD, analytics API, CSV export, and dashboard filters.
• Implemented 9 routes and 7 automated tests; executed a 900-request benchmark at concurrency 20 with 15.83 requests/second and 0% error responses.

Healthcare Triage Bot (GitHub) 2025
Python, Flask, REST API
• Developed a Flask-based triage assistant with UUID session tracking and a 7-node symptom workflow (5 open-text, 1 multiple-choice, 1 final summary) for structured initial guidance.
• Built the /chat API and responsive chatbot UI; resolved 10+ backend issues and reduced inconsistent responses by approximately 30%.

Education

B.Tech in Computer Science and Engineering, CMR University, Bengaluru 2026
CGPA: 7.81/10
Higher Secondary Education, Kamla High School 2020
Percentage: 71.20%

Certifications and Achievements

- NCAT Exam (Naukri, 2025) – All India Rank 6423
- Web Development Projects Certification – CodSoft
- JITHACK'24 Hackathon – Travel Booking Website Project
